

Stanchions for Window Awnings

Stanchions will hold down front bar in very heavy winds.

Without Stanchions front bar will move slightly in heavy winds over 40mph.

Window Awnings with Stanchions will not have rope, ring, straps or cleats. Using the stanchions will make the awnings non-retractable.

Stanchion Installation

1. Install awning first slipping on pipe clamps on threaded end of projection bars near elbow during installation.

After awning is installed

2. Attach hinge to one end of the stanchion bar eye end, then attach other eye end of stanchion bar to pipe clamp on projection arm.

4. Pull up Stanchion and position hinge on wall for a taut fit and mark.

5. Remove hinge and install hinge to wall.

6. Remove bolt from hinge and slip eye hole of eye end into hinge and replace bolt and tighten.
